

Sharda Vatsal Bhat

📍 Jammu & Kashmir, India ✉ shardavatsalbhat@gmail.com ☎ +91-6006606713 in Sharda Vatsal Bhat

Agentic AI Engineer with hands-on experience building autonomous agents using Google ADK and Gemini. Skilled in RAG pipelines, vector databases, and multi-agent system design. Focused on building practical, production-ready AI solutions.

Education

CGC University Mohali

Sept 2022 – July 2026

Bachelor of Technology in Artificial Intelligence and Data Science

- GPA: 7.5/10
- **Relevant Coursework:** Computer Architecture, Theory of Automata, AI, ML, Big Data, Deep Learning, Data Analytics using R

Experience

Data Associate L1

Infotact Solutions | Jun 2025 – August 2025

- Worked on data collection, cleaning, and validation to ensure high-quality datasets
- Performed data preprocessing and basic analysis to support downstream analytics and ML tasks
- Maintained data accuracy and consistency across structured datasets

Agentic AI Intern

AariyaTech | May 2026 – August 2026

- Built Autonomous AI agents using Google ADK & Gemini 2.5 Flash for task automation and workflow orchestration
- Designed multi-agent systems for candidate assessment, job matching and portfolio evaluation, integrating GitHub API and REST API calls
- Developed and validated 4 Agentic AI agents (Portfolio, Job Recommendation, Job Trends, Candidate Assessment) with workflow design and end-to-end testing

Projects

Portfolio Evaluation Agent

- Discover all public GitHub repos for a given username using the Discovery Agent
- Presents repo list and lets user select 5 repos for detailed analysis
- Analyzes selected repos via Gemini LLM + GitHub analyzer tool
- Aggregates per-repo analysis results into a final portfolio score using the aggregator agent
- Outputs structured JSON with repo metrics, aggregated score, and improvement recommendations

Tools & Technologies: Python, Gemini 2.5 Flash, Google ADK, GitHub API, REST API, Requests

STARK AI Assistant

- Orchestrates 35+ action modules through an agentic Planner-Executor pipeline
- Delivers real-time voice conversations with the Gemini Live API
- Retains long-term memory via MemoAI + Chroma DB with Gemini embeddings
- Ships as a desktop app with auto-updates and a managed Python runtime
- Secures access with face recognition and PIN fallback authentication

Tools & Technologies: Python, Gemini Live API, Playwright, Chroma DB, MemoAI, PyQt6

RAG AI Chatbot

- Builds a full RAG pipeline — document ingestion → chunking → Cohere embeddings → Pinecone similarity search → LLM generation
- Delivers token-by-token streaming answers over Server-Sent Events with a live “thinking” indicator
- Retains per-session conversation memory via Upstash Redis for contextual follow-up questions
- Ingests PDF, DOCX, TXT, MD, image uploads, and web URLs with graceful fallback handling
- Adds offline voice queries via faster-whisper local speech-to-text

Tools & Technologies: Python, Flask, Groq (Llama 3.3 70B + Qwen 3.6 Vision), Cohere embed-v4.0, Pinecone, Upstash Redis, faster-whisper

Technical Skills

Python, Google ADK, Vector Databases (Pinecone, Chroma DB), MCP, Git/GitHub, REST API, Flask, Prompt Engineering, LLMs, RAG

Certifications

AWS Academy – Generative AI Foundations, Data Analytics (Deloitte), Introduction to Data Science (Cisco), MongoDB Atlas, Solutions Architect (AWS), Claude Code in Action (Anthropic)
