Sharda Vatsal Bhat

Jammu & Kashmir, India shardavatsalbhat@gmail.com +91-6006606713 Sharda Vatsal Bhat

Agentic AI Engineer with hands-on experience building autonomous agents using Google ADK and Gemini. Skilled in RAG pipelines, vector databases, and multi-agent system design. Focused on building practical, production-ready AI solutions.

Education

CGC University Mohali *Sept 2022 – July 2026*
Bachelor of Technology in Artificial Intelligence and Data Science

- GPA: 7.95/10
- **Relevant Coursework:** Computer Architecture, Theory of Automata, AI, ML, Big Data, Deep Learning, Data Analytics using R

Experience

Data Associate L1
Infotact Solutions | Jun 2025 – August 2025

- Worked on data collection, cleaning, and validation to ensure high-quality datasets
- Performed data preprocessing and basic analysis to support downstream analytics and ML tasks
- Maintained data accuracy and consistency across structured datasets

Agentic AI Engineer
AariyaTech | May 2026 – October 2026

- Built Autonomous AI agents using Google ADK & Gemini 2.5 Flash for task automation and workflow orchestration
- Designed multi-agent systems for candidate assessment, job matching and portfolio evaluation, integrating GitHub API and REST API calls
- Developed and validated 4 Agentic AI agents (Portfolio, Job Recommendation, Job Trends, Candidate Assessment) with workflow design and end-to-end testing

Projects

Portfolio Evaluation Agent

- Discover all public GitHub repos for a given username using the Discovery Agent
- Presents repo list and lets user select 5 repos for detailed analysis
- Analyzes selected repos via Gemini LLM + GitHub analyzer tool
- Aggregates per-repo analysis results into a final portfolio score using the aggregator agent
- Outputs structured JSON with repo metrics, aggregated score, and improvement recommendations

Tools & Technologies: Python, Gemini 2.5 Flash, Google ADK, GitHub API, REST API, Requests

Interview IQ

- Builds a multi-agent AI Interviewer on Google ADK – a root agent with question-generation and evaluation agent mounted as tools
- Supports five interview modes (topic, custom questions, resume, uploaded docs, web/YouTube links) grounded by Pinecone RAG
- Adapts difficulty after every answer and scores each one 0-10, with the overall computed deterministically in code, not by the LLM

- Streams turns over FastAPI websockets to a Next.js client closing with a hire verdict and a downloadable PDF study report
- Deploys on Render's free tier with Firebase auth, Firestore and a 61 test-suite

Tools & Technologies: Python, Google ADK, Gemini 3.5 Flash-Lite, FastAPI, Next.js, Pinecone, Firebase (Auth, Firestore), Langfuse, WebSockets

RAG AI Chatbot

- Builds a full RAG pipeline — document ingestion → chunking → Cohere embeddings → Pinecone similarity search → LLM generation
- Delivers token-by-token streaming answers over Server-Sent Events with a live "thinking" indicator
- Retains per-session conversation memory via Upstash Redis for contextual follow-up questions
- Ingests PDF, DOCX, TXT, MD, image uploads, and web URLs with graceful fallback handling
- Adds offline voice queries via faster-whisper local speech-to-text

Tools & Technologies: Python, Flask, Groq (gpt-oss-120b + qwen3.6-27b), Cohere embed-v4.0, Pinecone, Upstash Redis, faster-whisper

Technical Skills

Agentic AI: Google ADK, multi-agent orchestration, prompt engineering, MCP

LLM APIs: Gemini, Groq

RAG & Retrieval: Pinecone, Chroma DB, Qdrant, hybrid search, embeddings, reranking

Languages & Backend: Python, FastAPI, REST APIs, WebSockets, Pydantic

Data & Auth: Firebase (Auth, Firestore), Redis

Dev Ops & Quality: Docker, Git/GitHub, Render, Langfuse, pytest

Certifications

AWS Academy – Generative AI Foundations, Data Analytics (Deloitte), Introduction to Data Science (Cisco), MongoDB Atlas, Solutions Architect (AWS), Claude Code in Action (Anthropic)
